

(revised 8/5/17)

Thanks for downloading the BretFX Smooth Strobe set of FCP X plugins! I hope you enjoy them and find them useful in your productions. If these instructions don't cover all questions about installation and usage, don't hesitate to contact support@bretfx.com

OVERVIEW

BretFX Smooth Strobe stutters the movement of video by skipping and repeating frames, while keeping the speed and timing of the video clip in tact. It includes 4 effects. 1 custom strobe effect to dial in any frame rate from 1 to 60fps. And 3 others designed specifically to limit your choices in 24,30 and 60p sequences to frame rates that will reproduce a smooth cadence. For example if you choose a frame rate of 10 fps on a 30 fps clip, it will smoothly play every third frame 3 times, skipping the frames in-between. But choosing 11 fps results in an odd repetition of 2, then 3 frames and a demonstrates a noticeable judder. The smooth cadence versions limit you to judder free frame rate choices.

COMPATIBILITY

Tested with Final Cut Pro X 10.2.3

TO INSTALL

Double click the DMG file to mount the installer and agree to the license. Double click the installer pkg and follow the prompts.

TO APPLY

In FCP X, navigate to the effects browser. Drag the either the “BretFX Strobe Custom FPS” effect or the “BretFX Strobe Smooth Cadence” effect that matches the frame rate of your project to a video clip in your timeline. In the inspector, choose a frame rate. The smooth cadence versions limit the frame rate choices to smooth judder free frame rates.

Enjoy!
